PEM® TYPE PF7M™ AND PF7MF™ CAPTIVE PANEL SCREWS

NEW!

- Small, compact and low-profile design for limited access areas.
- MAThread® anti cross-thread feature (see details on page 4).
- Phillips recess for tool or hand operation.
- Available in two mounting styles, self-clinching (Type PF7M) or flaring (Type PF7MF).
- Shoulder on retainer to provide a positive stop during installation.
- Available in two screw lengths.

PennEngineering is a licensee for MAThread® technology, a registered trademark of MAThread Inc.

TYPE PF7M™ SELF-CLINCHING CAPTIVE PANEL SCREWS

- Self-clinching mounting design provides high pushout resistance.
- Installs flush on back side of panel.
- Does not require special hole preparation.

Patented.

PART NUMBER DESIGNATION

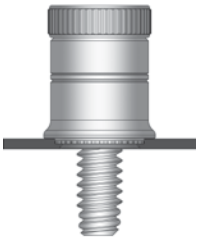
PF7	M	–	632	–	0	CN
Type	Anti Cross-thread Feature		Thread Size Code		Length Code	Finish

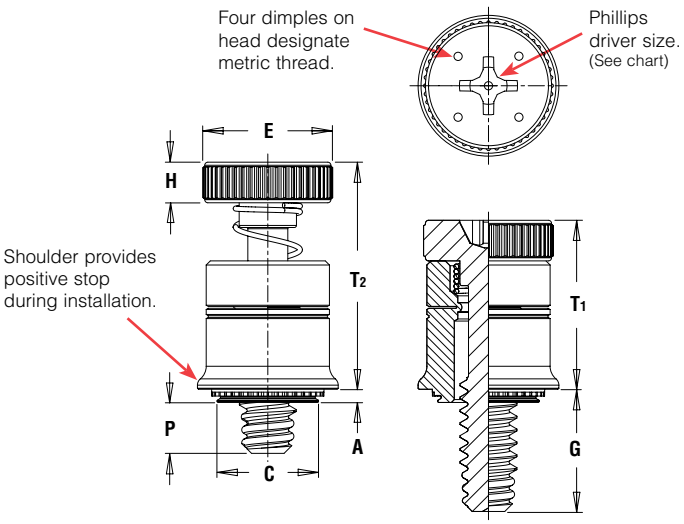
Threads:
External, ASME B1.1, 2A / ASME B1.13M, 6g (1)

Material:
Retainer: Carbon Steel
Screw: Heat-treated Carbon Steel
Spring: 300 Series Stainless Steel

Finish:
Retainer: Bright nickel over copper flash
Screw: Bright nickel over copper flash

For use in sheet hardness:
HRB 60 or less (Hardness Rockwell "B" Scale)
HB 107 or less (Hardness Brinell)





Unique MAThread® anti cross-threading feature.

All dimensions are in inches.

				1							7.62	1.65				

(1) As with all Class 2A/6g external threads with an additive finish, the maximum major and pitch, after plating, may equal basic sizes and be gauged to Class 3A/4h, per ANSI B1.1, Section 8, Table 3A and ANSI B1.13M, Section 8, Paragraph 8.2.

TYPE PF7MF™ FLARING CAPTIVE PANEL SCREWS

- Appropriate for close centerline-to-edge applications.
- Does not require high installation force.
- Installs into any panel hardness.
- Installs flush on back side of panel.

Patented.

(1) The values reported are averages when all installation specifications and procedures are followed. Variations in mounting hole size, sheet material and installation procedure will affect results. Performance testing of this product in your application is recommended. We will be happy to provide samples for this purpose.

(2) Torque values shown will produce a preload of 70% minimum tensile with nut factor "k" equal to .1

INSTALLATION

TYPE PF7M

1. Prepare properly sized mounting hole in sheet. Do not perform any secondary operations such as deburring.
2. Place fastener into recessed anvil, and place workpiece (preferably the punch side) over the shank of fastener.
3. With punch and anvil surfaces parallel, apply squeezing force until the shoulder of the retainer comes in contact with the sheet material.

	Thread Code	Anvil Dimensions (in.)		Anvil Part Number	Punch Part Number

INSTALLATION

TYPE PF7MF

1. Prepare properly sized mounting hole in sheet with countersink. Do not perform any secondary operations such as deburring.
2. Place fastener into recessed anvil, and place workpiece (preferably the punch side) over the shank of fastener.
3. With punch and anvil surfaces parallel, apply squeezing force to flare the retainer of the fastener.

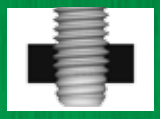
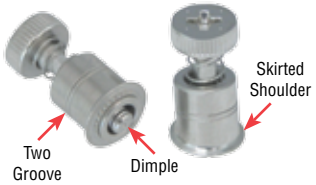
ANTI CROSS-THREAD TECHNOLOGY - HOW IT WORKS

-1-
MISALIGNED AXIS

-2-
THREADS CAM



-3-
THREADS DRIVE NORMALLY



To be sure that you are getting genuine PEM® brand fasteners, look for our "skirted shoulder" trademark, and our "dimple" and "two groove" registered trademarks.

RoHS compliance information can be found on our website.

Specifications subject to change without notice.
Check our website for the most current version of this bulletin.
