**SELF-CLINCHING  
NUTS**

# SELF-CLINCHING NUTS

Self-clinching nuts are installed by placing them in properly sized holes in sheets and applying a parallel squeezing force to the head of the nut. The sheet metal surrounding the head cold flows into an undercut thereby making the fastener an integral part of the sheet. A serrated clinching ring prevents the fastener from rotating after installation.

<p><b>S™/SS™/CLA™/CLS™/CLSS™ nuts</b> provide load-bearing threads in thin sheets with high pushout and torque-out resistance - <b>PAGES 4 and 5</b></p>		<p><b>H™ (non-locking) and HNL™ (locking) nuts</b> have threads that provide high pushout and torque-out resistance - <b>PAGE 8</b></p>	
<p><b>SP™, PEM 300® nuts</b> provide strong load-bearing threads in stainless steel sheets as thin as .030"/0.8 mm - <b>PAGES 4 and 5</b></p>		<p><b>SH™ hard panel nuts</b> install into thin, harder, high strength steel materials - <b>PAGE 8</b></p>	
<p><b>PEM RT® free-running locknuts</b> are free-running until clamp load is induced. A modified thread angle on the loaded flank provides the vibration resistant locking feature- <b>PAGE 6</b></p>	<p><b>NEW</b></p> 	<p><b>SMPS™/SMPP™ nuts</b> are for thinner sheet/close-to-edge applications - <b>PAGE 9</b></p>	
<p><b>Material and finish specifications - PAGE 9</b></p>			
<p><b>Installation - PAGES 10 and 11</b></p>			
<p><b>Performance data - PAGES 12 - 15</b></p>			

Many PEM self-clinching nuts in this bulletin are dimensionally equivalent to nuts manufactured to NASM45938/1 specifications. Consult our Marketing department for a complete Military Specifications and National Aerospace Standards guide (Bulletin NASM) on our website.

Screws for use with PEM self-clinching locking fasteners should be Class 3A/4h fit or no smaller than Class 2A/6g.

## PEM® SELF-CLINCHING NUT SELECTOR GUIDE

PEM Nut Type	Application Requires:									
	Recommended panel material (1)	Thinnest sheet .025" / 0.64 mm	Locking Threads		Closest centerline-to-edge distance	Superior corrosion resistance	Recommended for installation into stainless steel sheets	Compatible with aluminum anodizing	Harder high strength steel material	Non-magnetic
			Free-running	Prevailing torque						
S/SS/H	steel / aluminum									
CLS/CLSS	steel / aluminum					▪				▪
CLA	aluminum					▪	▪			▪
SP	stainless steel					▪	▪			▪
PEM RT®	steel / aluminum		▪							
SL	steel / aluminum			▪						
HNL	aluminum			▪						
SH	hardened alloy steel							▪		
SMPS	steel / aluminum	▪			▪	▪				▪
SMPP	stainless steel	▪			▪	▪	▪			▪

(1) Describes "best practice" for typical applications. Fasteners can be used in other panel materials not listed here if specified hardness limits are met. In all cases "For Use in Sheet Hardness" information is shown in chart on page 9.

### THREAD MASKING

PEM® PreTect™ thread masking solution provides protection for PEM® internally threaded fasteners. They reduce labor and protect threads from paint and powder coating processes. Fasteners are shipped with plugs and film (where applicable) already in place. [Click here](#) for more information.

Thread mask is available for applications where hardware is installed prior to painting. During assembly, the threads of the mating hardware will remove paint, electro deposited automotive under coatings, and weld spatter upon application of torque. PEM® nuts can be specially ordered with thread mask applied. [Click here](#) for more information.

Thread mask color may vary.

"BC" suffix will be added to part number to designate thread mask to fastener.

### AVAILABLE PEM® VARIMOUNT® FASTENING SYSTEM

The PEM® VariMount® fastening system (see PEM® Bulletin VM) utilizes a self-clinching nut paired with a round steel or stainless steel base plate to offer a clean and ready-made assembly for mounting into any rigid material or panel, including composites, plastics, and metals. Multiple radial holes in the base plate and a generous footprint provide effective mounting of the assembly. Mounting can be performed either on the front or through the back of a panel.

# SELF-CLINCHING NUTS

- S/SS nuts are recommended for use in steel or aluminum sheets HRB 80 / HB 150 or less.
- CLS/CLSS nuts are recommended for use in steel or aluminum sheets HRB 70 / HB 125 or less.
- SP nuts are recommended for use in stainless steel sheets HRB 90 / HB 192 or less.
- CLA nuts are recommended for use in steel or aluminum sheets HRB 50 / HB 82 or less.

- For maximum performance, we recommend that you use the maximum shank length for your sheet thickness.
- This shank code not available for SP nuts.
- This thread size S nut, with a -2 shank code, can be installed successfully without the need to pre punch a mounting hole in a separate operation. See page 15 for more information.

The increased hardness of stainless steel panels requires careful consideration when installing self-clinching fasteners. See page 16 or refer to Fastener Installation [Dos and Don'ts](#) on our website.

- (2) This shank code not available for SP nuts.
- (3) This thread size S nut, with a -2 shank code, can be installed successfully without the need to pre punch a mounting hole in a separate operation. See page 15 for more information.

## PEM RT® FREE-RUNNING LOCKNUTS

Free-running locking feature allows screw to turn freely until clamp load is applied. If the tightening force is removed, these nuts no longer provide any torsional resistance to rotation until clamp load is reapplied.

- Resistant to vibrational loosening.
- Back side of panel is flush or sub-flush for screw installation.
- Locking feature reusability is not affected by number of on/off cycles.
- Uses same mounting hole and installation tooling as standard S™ nuts.
- Recommended for use in steel or aluminum sheets HRB 80 / HB 150 or less.

### PART NUMBER DESIGNATION

PEM RT® free-running locking feature can be added to other PEM® internally threaded nuts.

All dimensions are in inches.

The graph represents the clamp load of the joint versus the amount of cycles during transverse vibration testing for an PEM RT® free-running locknut, a standard S nut, a split ring lock washer and Loctite Red 271.

### Testing conditions:

- Transverse vibration testing.
- M6 thread size nuts, average of 30 pieces.
- Clamp load applied using metric property class 12.9 screws.
- Nuts tested until loss of clamp load or 2,000 cycles is reached.

Details on PEM RT® vibration resistant thread technology can be found on our web site at: [https://www.pemnet.com/files/design\\_info/techsheets/RT\\_Thread\\_Form.pdf](https://www.pemnet.com/files/design_info/techsheets/RT_Thread_Form.pdf)

# SELF-CLINCHING NUTS

## SL™ TRI-DENT® PREVAILING TORQUE LOCKNUTS

Prevailing torque locking feature produces friction between threads of mated components thereby increasing the force needed to tighten as well as loosen the nut. Prevailing torque locknuts provide essentially the same torque value regardless of the amount axial load applied.

- 3 cycle locking performance. <sup>(1)</sup>
- Resistant to vibrational loosening.
- Back side of panel is flush or sub-flush for screw installation.
- Uses same mounting hole and installation tooling as standard S™ nuts.
- Recommended for use in sheets HRB 80 / HB 150 or less.

(1) Achieved using steel socket head cap screws, 180 ksi / property class 12.9 with standard finish of thermal oxide and light oil.

# SELF-CLINCHING NUTS

## H™ NUTS AND HNL™ PREVAILING TORQUE LOCKNUTS

- Meets prevailing torque requirements for IFI 100/107 Grade B (unified) and ANSI B18.16.1M (metric) locknuts.
- H nut is recommended for use in sheets HRB 80 / HB 150 or less.
- HNL nut is recommended for use in sheets HRB 60 / HB 107 or less.

### PART NUMBER DESIGNATION

Clinching profile may vary.

All dimensions are in inches.

UNIFIED	Thread Size	Type		Thread Code	A (Shank) Max.	Min. Sheet Thickness	Hole Size In Sheet +0.05 -0.00	C Max.	E ±.010	T <sub>1</sub>	T <sub>2</sub>	Min. Dist. Hole $\phi$ To Edge
		Non-Locking	Self-Locking (1)							Non-locking	Self-locking	
										±.005	±.010	
.250-20 (1/4-20)	—	HNL	0420	.058	.058	.344	.343	.500	.189		.380	
.313-18 (5/16-18)	—	HNL	0518	.058	.058	.413	.412	.575	.240		.420	
.375-16 (3/8-16)	H	HNL	0616	.058	.058	.500	.499	.650	.300		.480	

All dimensions are in millimeters.

METRIC	Thread Size x Pitch	Type		Thread Code	A (Shank) Max.	Min. Sheet Thickness	Hole Size In Sheet +0.13	C Max.	E ±0.25	T <sub>1</sub>	T <sub>2</sub>	Min. Dist. Hole $\phi$ To Edge
		Non-Locking	Self-Locking (1)							Non-locking	Self-locking	
										±0.13	±0.25	
M6 x 1	—	HNL	M6	1.48	1.48	8.75	8.72	12.7	5		10	
M8 x 1.25	—	HNL	M8	1.48	1.48	10.5	10.47	14.6	6.3		11	
M10 x 1.5	H	HNL	M10	1.48	1.48	12.7	12.67	16.5	7.9		12	

(1) During installation, the projections on the heads of HNL self-locking nuts may be flattened. This is not detrimental in any way and will not affect self-locking or self-clinching performance.

## SH™ HARD PANEL NUTS

- Installs into harder, high strength steel materials (high strength steel sheets up to 975MPa tensile strength).
- Hardened nut material provides stronger thread strength.

### PART NUMBER DESIGNATION

(Clinching profile may vary)  
Due to manufacturing procedure, parts may have a counterbore at shank end.

All dimensions are in inches.

UNIFIED	Thread Size	Type	Thread Code	Shank Code	A (Shank) Max.	Min. Sheet Thickness (1)	Hole Size in Sheet +0.03 -0.00	C Max.	E ±.010	T ±.010	Min. Dist. Hole $\phi$ To Edge

											2
M10 x 1.5	SH	M10	1	2.21	2.29	14	13.97	17.35	7.48	13.5	

(1) For maximum performance, we recommend that you use the maximum shank length for your sheet thickness.

# SELF-CLINCHING NUTS

## SMPS™/SMPP™ NUTS

- Installs into sheets as thin as .025" / 0.64 mm.
- Reduced outer dimensions and thinner sheet capabilities compared to Type S/SP thread sizes.
- SMPS nut is recommended for use in sheets HRB 70 / HB 125 or less.
- SMPP nut is recommended for use in stainless steel sheets HRB 90 / HB 192 or less.

Part number codes for finishes										None	ZI	LZ	X	ZC						

- Special order with additional charge.
- Part numbers for aluminum nuts have no plating suffix.
- Unplated threads are sized to accept a basic go gauge after .00025" / 0.0064 mm plating.
- See PEM® Technical Support section of our web site for related plating standards and specifications.
- With rust preventative oil.

- Panel material should be in the annealed condition.
- Fasteners should not be installed adjacent to bends or other highly cold-worked areas.
- HRB - Hardness Rockwell "B" Scale. HRC - Hardness Rockwell "C" Scale. HB - Hardness Brinell.
- Modified thread form on loaded flank. Will accept a maximum material 6g/2A screw.

# SELF-CLINCHING NUTS

## INSTALLATION - S™/SL™/SMPS™/SS™/CLS™/CLSS™/CLA™/S-RT™/H™/HNL™ NUTS

1. Prepare properly sized mounting hole in sheet. Do not perform any secondary operations such as deburring.
2. Place fastener into the anvil hole and place the mounting hole (preferably the punch side) over the shank of the fastener as shown in diagram to the right.
3. With installation punch and anvil surfaces parallel, apply squeezing force until the head of the nut comes into contact with the sheet material.

**COUNTERBORE ANVIL**  
Thread Sizes #2-56 to 5/16  
and M2 to M8

**PROTRUSION ANVIL (1)**

CLS/S/SL/S-RT Thread Sizes 3/8, 7/16, 1/2, M10 and M12  
H/HNL Thread Sizes 5/16, 3/8, M8 and M10

(1) Large nut anvils use protrusion to locate part instead of counterbore.

## INSTALLATION - SP™/SMPP™ NUTS (1)

1. Prepare properly sized mounting hole in sheet. Do not perform any secondary operations such as deburring.
2. Place fastener into the recommended counterbore anvil hole and place the mounting hole (preferably the punch side) over the shank of the fastener as shown in diagram.
3. With installation punch and anvil surfaces parallel, apply squeezing force until the head of the nut comes into contact with the sheet material.

(1) For best results, we recommend using the installation punch and anvil shown. Deviations from recommended installation tooling may result in sheet distortion and reduced performance.

**NOTE:** Variations in hole preparation, installation tooling, installation force, and sheet material type, thickness, and hardness will affect both performance and tooling life.

## INSTALLATION - SH™ NUTS

1. Prepare properly sized mounting hole in sheet. Do not perform any secondary operations such as deburring.
2. Place fastener into the anvil hole and place the mounting hole (preferably the punch side) over the shank of the fastener as shown in diagram to the right.
3. With installation punch and anvil surfaces parallel, apply squeezing force until the head of the nut comes into contact with the sheet material.

#### INSTALLATION NOTES

- For best results we recommend using a Haeger® or PEMSERTER® press for installation of PEM® self-clinching fasteners. Please check our website for more information.
- Visit the Animation Library on our website to view the installation process [for select products](#).

(1) Published installation forces are for general reference. Actual set-up and confirmation of complete installation should be made by observing proper seating of fastener as described in the installation steps. Other performance values reported are averages when all proper installation parameters and procedures are followed. Variations in mounting hole size, sheet material, and installation procedure may affect performance. Performance testing this product in your application is recommended. We will be happy to provide technical assistance and/or samples for this purpose.

(1) Installation controlled by proper cavity depth in installation tooling.

### PUSHOUT TEST

Pushout tests shall be performed from the grip or shank side of the installed fastener. An axial load shall be applied to the fastener as shown using a hardened test screw, while evenly supporting the test strip around the fastener. The typical position rate is .25" / 6.35 mm per minute. Dimensions are identified per PEM Bulletins where "E" equals head diameter and "T" (or "L") equals head height. The pushout force is measured using a force or compression tester with a range that will cover the expected forces.

### TORQUE-OUT TEST

Torque-out tests shall be performed from the shoulder or head side of the installed fastener. Torque shall be applied to the fastener in the manner illustrated, using a hardened test screw and washer, while firmly holding the test strip. Test screws should be of sufficient tensile strength to resist thread stripping. A minimum of two screw threads must extend beyond the fastener.

## SELF-PIERCING, SELF-CLINCHING TOOLING

Specialized PEMSERTER® tooling allows installation of S self-clinching nuts into aluminum sheets (sizes 1/4", 5/16", M6 and M8) in one pierce/press operation.

For more information, see our web site for Tech Sheet [PEM® - Ref / Self-piercing, self-clinching tooling](#). To locate, simply type "self-piercing" in site search box.

## SELF-CLINCHING NUT INSTALLATION DOS AND DON'TS

### "DOS"

- DO** select the proper fastener material to meet corrosion requirements.
- DO** make certain that panel material is in the annealed condition.
- DO** make certain that hole punch is kept sharp to minimize work hardening around hole.
- DO** provide mounting hole of specified size for each fastener.
- DO** maintain the hole punch diameter to no greater than  $+.001"/.025$  mm over the minimum recommended mounting hole for type SP nuts into stainless steel sheets.
- DO** install fastener into hole punch side of sheet.
- DO** make certain that shank (or pilot) is within hole before applying installation force.
- DO** make certain that fastener is not installed adjacent to bends or other highly cold-worked areas.
- DO** apply squeezing force between parallel surfaces.
- DO** utilize recommended installation tooling when installing fasteners.
- DO** apply sufficient force to totally embed clinching ring around entire circumference and to bring shoulder squarely in contact with sheet.

### "DON'TS"

- DON'T** attempt to install any self-clinching nut other than types SP/SMPP fasteners into a stainless steel sheet.
- DON'T** install steel or stainless steel fasteners in aluminum panels before anodizing or finishing.
- DON'T** deburr mounting holes on either side of sheet before installing fasteners – deburring will remove metal required for clinching fastener into sheet.
- DON'T** install fastener closer to edge of sheet than minimum edge distance indicated by manufacturer – unless a special fixture is used to restrict bulging of sheet edge.
- DON'T** over-squeeze. It will crush the head, distort threads, and buckle the sheet. Approximate installation forces are listed in performance data tables. Use this info as a guide. Be certain to determine optimum installation force by test prior to production runs.
- DON'T** attempt to insert fastener with a hammer blow – under any circumstances. A hammer blow won't permit the sheet metal to flow and develop an interlock with the fastener's contour.
- DON'T** install screw in the head side of fastener. Install from opposite side so that the fastener load is toward sheet. The clinching force is designed only to hold the fastener during handling and to resist torque during assembly.
- DON'T** install fastener on pre-painted side of panel.

All PEM® products meet our stringent quality standards. If you require additional industry or other specific [quality certifications](#), special procedures and/or part numbers are required. Please contact your local sales office or representative for further information.

Regulatory [compliance information](#) is available in Technical Support section of our website. Specifications subject to change without notice. See our website for the most current version of this bulletin.
